At DornerWorks we know that you want to be a market leader.

In order to do that, you need technology to make your products better. The problem is, technology development is challenging, which can make you feel stuck and stressed out.

We believe you deserve for your product to be its best.

We also understand that you care about your products - we do too, which is why our 95+ engineers can guide you to success, like they've helped dozens of other companies like yours, every year.

With guidance from DornerWorks, you can stop worrying about wasting time and money on products that don't work the way you want them to (or don't work at all), and instead, break free from the stress of a never-ending workweek, focus on your customers, and build products that dominate the market.

Based in Grand Rapids, Michigan, DornerWorks has been rapidly growing since it was founded in 2000, helping accelerate product development in the Aerospace & Defense, Automotive, Medical, and Internet of Things (IoT) markets.

ECONOMIC IMPACTS OF YOUR COMPANY BEING IN MICHIGAN

"Being based in Michigan, DornerWorks serves aerospace companies like GE Aviation, Parker Aerospace, Woodward and Eaton. Drawing graduates from Grand Valley State University, Calvin College, the University of Michigan, Michigan State University, Michigan Tech University, Western Michigan University, and other established engineering school in the area, DornerWorks has marked continuous growth for the last few years. We foster active relationships with these schools by sponsoring senior projects, training new engineers through Co-Op and intern programs, and hiring new graduates."

"DornerWorks also works actively with local aerospace and industry groups like the Aerospace Industry Association of Michigan (AIAM), The Right Place, Michigan Economic Development Corporation (MEDC), Michigan Defense Center (MDC), National Defense Industrial Association (NDIA), and others."

GREATEST ACCOMPLISHMENTS

"In recent years, DornerWorks has successfully performed on several Small Business Innovation Research contracts, implementing state-of-the-art embedded software in products for organizations like DARPA, NASA, the US Army, and US Navy."

"DornerWorks is also working on projects at the forefront of NASA's future space travel plans, including developing the safety-critical networking platform space travelers aboard the Orion missions to the moon and Mars will use to stay connected to colleagues and loved ones on Earth."

"However, one of the most valuable features of the company from our customers' point of view is the fact that DornerWorks is a "one-stop-shop". The breadth of experience our various departments bring to each project is joined with a cohesiveness that might not otherwise be found in a single design company."

"In the midst of nearly two decades of sustained growth, DornerWorks is proud of the fact that we have maintained a fun and innovative small business culture where popular on-campus group activities are hosted monthly and staff members organize extracurricular events like softball leagues, 5K runs, and cycling trips."
